Post dialysis volumes &amp; observations

		Vol	Conc'l h
65-75	Quite turbid	38 ml	6.5 ml

42-50	Sp. turbid	30 ml	~ 4.5 ml
-------	------------	-------	----------

Buffer	Clear	36 ml	~ 4 ml
--------	-------	-------	--------

Concentrate to ~ 5 ml using YM 10 membranes

Then spin turbid ones & check sups vs pellets on gels - to decide whether to include pellets.

65-75	} Filtered thru 0.45 $\mu$ Acrodisc/Filterx type filters	→ Filter burst; recovered 1.4-1.5 ml
42-50		→ Recovered ~ 2 ml

Not. both were contaminated w/ rod-like bacteria

To Helen Hukemun (for Abs, Inc) Redacted

~ 1.4 ml 65-75 above; to be sent on dry ice  
3 rabbits

200  $\mu$ g injections at 1, 7, 21, 35, 56 days  
bleeds at 28 & 63 days

Estimate 1  $\mu$ g/ml (see next page)

enough for first 2 injections

will prepare more for subsequent ones
